

## multi-port kit

### double your inlets

The multi-port kit allows you to increase the amount of inlet ports into your SEP unit.

benefits include:

- space saving - no need for multiple units
- connect multiple devices to one SEP unit
- easy to install in situ

#### applications include:

manufacturing

oil & gas

automotive

## STANDARD SEP unit

### up to 4 inlet ports

All standard single SEP units are shipped with one porting block (as shown) allowing up to 4 inlet pipes to be attached.

Doubling the inlet capacity couldn't be easier with the multi-port kit:

- 1 remove the elbow fitting

## WITH multi-port kit

### up to 8 inlet ports\*

- 2 connect the T-piece in the place of the elbow

- 3 screw fix the second porting block

- 4 fit the straight adaptor and black tube

Then simply attach up to four more pipes as you would normally.

NOTE: the amount of available inlet ports will depend on the siting of the SEP unit

\*maximum of 8 inlet ports is based on the unit being free standing and both port blocks being accessible

multi-port kit CANNOT be used in conjunction with wall mounted units using the Sepura™ WMB
